

Ali Hamza

Junior Web Developer

As a junior web developer, I craft responsive websites and user-friendly interfaces using HTML, CSS, and JavaScript. Collaborating with experienced developers, I optimize performance and contribute to creative projects. With a thirst for learning and a drive for innovation, I'm poised to leave your mark in the digital realm.

EDUCATION

Study Program COMSATS

02/2022 - Present

Courses

- Programming Fundamentals
- Data Structure and Algorithms
- Discrete Structures
- Databases Systems
- Artificial Intelligence
- Object Oriented Programming
- Design and Analysis of Algorithm
- Computer Organization and Assembly Language
- Mobile Application Development

WORK EXPERIENCE

Full Stack Web Developer Software Synergy Solutions and Club

07/2024 - Present

Peshawer Pakistan(Remote)

Achievements/Tasks

- Enhanced Application Performance
- Scalable Architecture Design
- Database Management
- API Integration

SKILLS

React JS

SQL

HTML

CSS

Javascript

Express JS

Node JS

Git/Github

Jira Software

APIs

React Native

Tailwind CSS

PROJECTS

Pinterest Clone (05/2024 - Present)

- Currently engaged in the development of a Pinterest-inspired platform, leveraging the Unsplash API to dynamically render pins and integrate robust search functionality. Employing React.js for responsive front-end design and Styled Components for streamlined styling. Continuously refining features and functionalities as the project remains in active development.

Shoe Ecommerce Store (01/2024 - 02/2024)

- Developed a shoe ecommerce store featuring essential functionalities such as product addition, browsing, cart management, and order placement. Leveraged React.js for dynamic front-end development, Node.js and Express.js for robust back-end architecture, and Microsoft SQL Server for efficient database management.

Job Board (07/2023 - 11/2023)

- Designed and implemented a job board platform catering to both employers and employees. Employers can effortlessly post job listings and manage applications, while job seekers can explore available opportunities and apply seamlessly. Implemented custom authentication systems for both employer and employee access. Technologies utilized include EJS for dynamic views, Node.js and Express.js for backend development, and Microsoft SQL Server for database management.
